## **Definition**

Gel diet Energy is a complete nutritional solution that can be used to both diet and hydrate animals using a single product.

## **Product Objective**

Gel diet Energy is composed of 55% water and of proteins, fast carbohydrates (sugar), lipids, vitamins and minerals to provide animals with their main nutrients during transport or a stressful situation such as a post-operatory period. In particular, it is a source of energy that is easy to consume and assimilate.

Gel diet Energy can be distributed provisionally (2 to 7 days) to animals in a stressful situation or a recovery phase as a complement to granulated diets.

## Directions for use

#### **Distribution period:**

- √ 1 day before the transport phase for acclimatization, then throughout transport.
- √ 72 hours for animals weakened by protocol conditions; replenishment varies depending on cage type (particularly cage ventilation).

#### Gel diet Energy can be distributed

- ✓ Placed directly on the cage floor, in the open package,
- Removed from the packaging and placed directly in the cage dieting dish, or on the cage floor.

**Quantity consumed per day:** 10-15 g / day for mice, 40-50 g / day for rats. Daily consumption depends on species and strain.

**Distribution method:** ad libitum or rationing depending on experimental protocols. Standard diet (e.g. A04 or A03 granules) can be kept within animals' reach.

**Storage:** the product in its closed, original packaging can be stored for 6 months in a dark area at room temperature. Can be stored at 4°C.

After opening, the product can be kept for 5 days maximum.

## About this Product

Solid paste with 70% water content, packaged in individual, protectively sealed tubs. Irradiated at 10 kiloGrays.

√ 100 g tub, sold in packs of 60. The tubs are grouped in quantities of 30 in a hermetically sealed envelope.
